

Workshop 1

A room with 3 openings and / or doors will offer you a maximum of possibilities to play with in one *Dunkelstadt* Module.

To produce a room like this, you only need a sharp scalpel, a cutter, a bit abrasive paper, a ballpoint and about 15 Minutes of your time.

1. With your scalpel cut through the wall and post (start with a flat cut and go deeper little by little), following the gap between them.

2. With a (carpet) cutter you can now carefully separate horizontal the wall section from the floor.

3. Now you only need to straighten the cut surface with the help of the abrasive paper.

4. With your ballpoint or slate pencil you can now „lengthen“ gaps, cracks and tile design easily into the hard foam material. If you paint it afterwards, you will only see your great work, but not what you've done to get it this way.

In a uniform manner you can also build a **SECRET DOOR**.
How to do this is something we'll show you in our next workshop.
